**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10, 13-15, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raneburger et al (WO 97/33564) and Hatton (WO 95/25516) in combination.

The instant claims are drawn to a composition comprising amoxicillin, clavulanic acid, and an absorption enhancer.

Raneburger et al teach compositions comprising amoxicillin, in the form of amoxicillin trihydrate, and clavulanic acid, in the form of a potassium salt, said compositions comprise binders, such as polyvinylpyrrolidone, and can be made by moist granulation using an organic solvent, such as acetone (see p 2-3 and examples 7-11).

The difference between Raneburger et al and the instant claims is that Raneburger et al do not expressly teach an auxiliary that may be considered an absorption enhancer, as claimed herein. However, Hatton teaches pharmaceutical formulations containing amoxicillin or potassium clavulanate and a metal alkyl sulfate surfactant, such as sodium lauryl sulfate.

Art Unit: 1621

It therefore would have been obvious to a person having ordinary skill in the art, at the time the present invention was made, to include such a surfactant to a pharmaceutical formulation, such as a coated tablet as taught by Hatton, comprising amoxicillin and/or clavulanate, especially if a water-resistant or enteric coating is desirable for the formulation (see abstract and p 1-5).
